Marcus Hellberg
@marcushellberg

What if frontend development didn't need to be so difficult?

Full-stack teams ship quality software faster.

Use layouts to build views

```
new VerticalLayout(
  new Button("Button 1"),
  new Button("Button 2"),
  new Button("Button 3")
);
```

vaadin}>

Use layouts to build views

```
new HorizontalLayout(
        new Button("Button 1"),
        new Button("Button 2"),
        new Button("Button 3")
);
```

vaadin}>

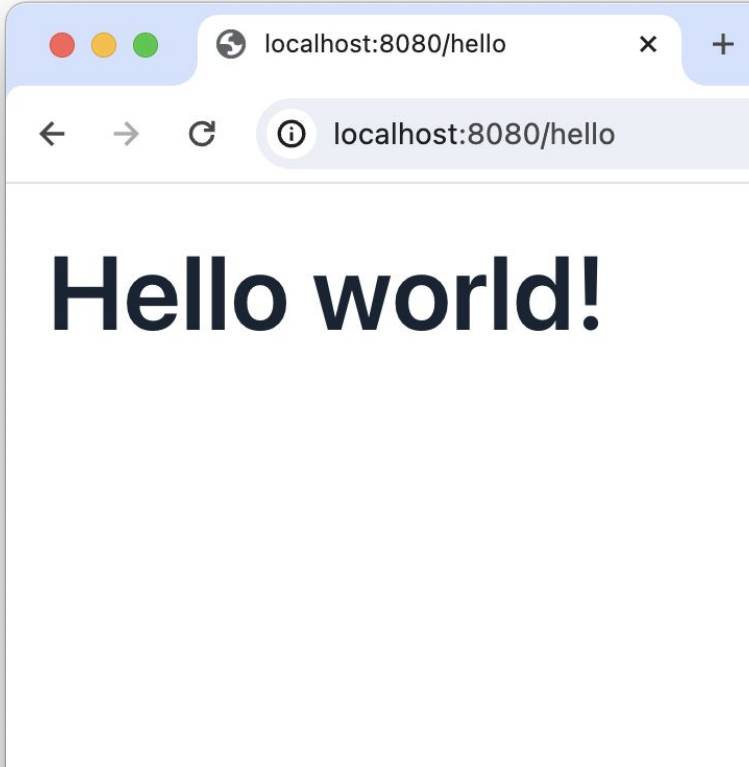
Use layouts to build views

```
new VerticalLayout(
  new HorizontalLayout(
      new Button("Button 1"),
      new Button("Button 2")
  ),
  new Button("Button 3")
);
```

Use layouts to build views

```
@Route("hello")
public class HelloWorldView
    extends VerticalLayout {

    public HelloWorldView() {
        add(new H1("Hello world!"));
    }
}
```



Use events for interaction

```
var name = new TextField("Your name");
var button = new Button("Say hello");

button.addClickListener(e -> {
   add(new Paragraph(
         "Hello, " + name.getValue()))
});
```
